---

Brandi,

April 4 sounds good for the pore water sampler placement. Will get back to you today on the dive team inspection vs oversight of PRP inspection question.

Thanks,

**Subject:** Proposed dates for San Jacinto sampler placement

Gary,

The Dive Team would like to propose the week of April 4<sup>th</sup> for sampler placement at San Jacinto. Are you leaning towards asking us to also perform a more complete inspection of the cap during this same trip? We could complete this task during the same trip by adding two or three days of work.
